1.Project Selection

Event Volunteer Management System

(manages volunteers, events, schedules, and task assignments)

Description of model:

Joins for volunteers, events, and assignments; constraints on scheduling conflicts; transactions for volunteer registration and updates; secure login system.

2.Form of Communication???

Whatsapp gc.

3. Application Requirements.

FRAMEWORK-Build your application using PHP for server-side processing, HTML/CSS/JavaScript

Backend Processing: Use PHP for **backend processing** to handle form submissions, dataprocessing, and interactions with the database.

Database: Design your MySQL database with optimized structures and use joins for data retrieval.

4. Documentation.

- Document the entire **development process.**
- Project Plan: Describe your project scope, objectives, and **initial design plans.**
- Technical Details: Include a step-by-step overview of the development process, code snippets, and the **logic behind key features.**
- Database Design: **Explain** your database schema and the use of "**joins" for data retrieval.**
- • User Guide: Create a simple guide explaining how to use the application, with **screenshots and step-by-step instructions.**

5.Core Focus Area

Use of Joins: Implement and optimize SQL joins in your database queries for efficient data retrieval. This will be a significant part of your project evaluation.

- **Security Enhancements:** Apply security best practices, such as:Data sanitization and validation to prevent SQL injection.

Task

Mariama Diallo -

- ☑ ~~Entities and attributes of SQL~~
- ☑ ~~PHP~~

Nayeem Ali

- ☑ ~~SQL~~
- ☑ ~~Documentation of process~~
